

PROJECT DESCRIPTION
BR000-0000-00(684), Lowndes County
P.I. 0000684

Project BR000-0000-00(684) would replace the existing bridge over Dukes Bay Drainage Canal on existing alignment. The project is located on CS 1191/Tucker Road, located in the southwest quadrant of Valdosta, Georgia. The project begins approximately 160 feet west of the bridge and ends approximately 270 feet east of the bridge. The existing 48'x 24' concrete and timber bridge will be replaced with a double barrel 10' x 11' culvert. The typical section for the bridge approaches would consist of two 12-foot lanes, 6-foot grassed shoulders, and open ditches. The existing right-of-way on City Street 1191/Tucker Road is 80 feet and the maximum proposed right-of-way would be 230 feet. City Street 1191/Tucker Road would be closed approximately 9-12 months during construction and traffic would be detoured around approximately 1.5 miles of local roads via SR 31/Madison Highway, Smith Avenue and US 41/SR 7. The total length of the project is approximately 0.095 mile.
